

Predicting Ski Jumps using State-Space Model

Živa Hegler and Neca Camlek

JSI

October 5, 2025

Outline

- Introduction
- Modeling Framework and Dataset
 - State-space models and Least squares method
 - Data processing
- Methodology
 - Different approaches and error function
 - Animation app
- Main Results
- Discussion
- Conclusion

Motivation

- ▶ Planning of ski jump enlargement and anticipating risky conditions
- ▶ Goal: Predict ski jumps based on external factors
- ▶ Contributions

- ▶ State-space models (SSM)
- ▶ Least squares method (LS)

Data Description

- ▶ Source of data
- ▶ Key variables
- ▶ Data preprocessing steps

Images in beamer

first figure I have inserted in beamer.

Figure: My first figure in beamer.

Images in beamer

first figure I have inserted in beamer.

Figure: My first figure in beamer.

Approach

- 1 Step one
- 2 Step two
- 3 Step three

Customized caption

Figure: My first figure in beamer.

App

- ▶ Description of the app
- ▶ Key features

Main Findings

Key Result

Your important result goes here.

Customized caption

Actual vs Simulated Trajectory
Error: 1.689, Simulated length: 198.7, Actual length: 201.9

Figure: My first figure in beamer.

Interpretation

- ▶ What the results mean
- ▶ Implications
- ▶ Limitations

Summary

- ▶ Short recap
- ▶ Possible extensions
- ▶ Final message

Thank you!
